Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/825,171	Applicant(s) MARTINEAU ET AL.	
	Examiner Samir Termanini	Art Unit 2178	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 16 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

BACKGROUND

1. This action is responsive to the following communications: Application filed on 4/16/2004.
2. Claims 1-10 are pending in this case. Claims 1 and 6 are in independent form.
3. The information disclosure statement (IDS) filed on 8/25/2005 has been acknowledged and considered by the examiner. The Initial copy of form PTO-1449 is included in this office action.

CLAIM REJECTIONS - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more Claims particularly pointing out and distinctly Claiming the subject matter which the applicant regards as his invention.
5. **Claim 3** is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly Claim the subject matter which applicant regards as the invention.

More specifically, Claim 3 requires that "...a maximum number of buttons are displayed..." and further requires, from Claim 1, that each button be "...corresponding to a network object." However, Claim 3 then goes on to set forth

Art Unit: 2178

an impossible proposition: that "the number of network objects...within the hierarchy exceeds the maximum number of buttons." Additionally, the rest of the Claim's limitations do not express any conclusions.

CLAIM REJECTIONS - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. **Claims 1-4, and 6-9** are rejected under 35 U.S.C. 102(b) as being anticipated by *Dovin et al.* (US Pg-Pub 2003/0018665 A1).

As to independent **Claim 1**, *Dovin et al.* describe(s): a method of presenting network object hierarchy information in a network management tool ("...a user of client 104 utilizes the web browser 106 for transmitting a request for a web page 108, which is identified by a Uniform Resource Locator (i.e., "URL"), over the communications network 102 to web server 114....," para. [0029]), the network management tool for use in managing a communication network having a hierarchy of network objects ("...The depth-emphasizing navigation structure depicts a hierarchical path through the information space from broader categories through more narrower categories through to a final web page, i.e., displaying links from a home page of the Website through a

Art Unit: 2178

plurality intermediary web pages representing categories (i.e., child web pages) to the current page (i.e., also a child web page) atop the current web page as breadcrumbs, i.e., breadcrumb navigation....," para. [0004]), the method comprising the steps of: displaying status information of a displayed network object on a terminal ("...The displayed web page 510 ...," para. [0042]), the displayed network object having at least one higher-level network object within the hierarchy ("...depicts all top levels of the Website ...," para. [0004]); displaying an ordered series of a plurality of buttons on the terminal ("...breadcrumb navigation trail 514 ...," para. [0042]), each button corresponding to a network object within the hierarchy and being ordered according to a position within the hierarchy of the corresponding network object ("...since the last page represents a web page that is currently displayed....," para. [0005]), the series including at least a displayed network object button corresponding to the displayed network object ("...storing breadcrumbs associated with web pages downloaded to the web browser at the client, updating the stored breadcrumbs with the generated breadcrumb to form a breadcrumb navigation trail of breadcrumbs associated with navigation of the web pages at the Website; and displaying the breadcrumb navigation trail on each downloaded web page for user selection.," para. [0015]); displaying on each button at least a portion of a label indicating the corresponding network object ("...the generated breadcrumb including navigation information for each downloaded web page....," para. [0014]); and designating a new displayed network object by selecting a network object displayed in the status information or by selecting a button ("...the current web page ...," para. [0032]).

As to dependent **Claim 2**, which depends from Claim 1, *Dovin et al.* further disclose the method of Claim 1 wherein the ordered series includes a root button corresponding to a root object of the hierarchy ("...the parent web page 'Home'...", para. [0005])(emphasis added).

With regard to dependent **Claim 3**, which depends from Claim 2, the examiner has attempted to construe the Claim's limitations in the spirit and scope of invention in view of the abovementioned 35 U.S.C. §112 2nd paragraph rejection.

Dovin et al. further disclose a maximum number of buttons are displayed ("...structure depicts all top levels of the Website ...," para. [0004]), and wherein if the number of network objects between the root object and network object, within the hierarchy exceeds the maximum number of buttons ("...If desired, the breadcrumb navigation trail may maintain all breadcrumbs regardless of whether a breadcrumb already appears in the breadcrumb navigation trail. ...," para. [0030]), displaying a number of buttons equal to the maximum number of buttons including the root button ("... If desired, the breadcrumb navigation trail may maintain all breadcrumbs regardless of whether a breadcrumb already appears ...," para. [0030]), the displayed network object button ("...client's web browser currently is displaying the web page 108...", para. [0038]), and buttons corresponding to network objects progressively higher than the displayed network object within the hierarchy ("...the links are displayed in order from a first web page (i.e., parent page) to subsequently visited web pages (i.e., child web pages). ...," para. [0005]).

As to dependent **Claim 4**, which depends from Claim 3, *Dovin et al.* further disclose the method of Claim 3 wherein the buttons are arranged along a horizontal row above the status information ("...across the top of the web page running from the left margin to the right margin....," para. [0004]), with the root button at the left and the displayed network object button at the right ("...a first web page (i.e., parent page) to subsequently visited web pages (i.e., child web pages)....," para. [0005]). See also Fig. 5, reproduced below.

As to **Claims 6-9**, these Claims differ from Claims 1-4, respectively, only in that they are directed to products defined by the processes of Claims 1-4, respectively. Accordingly, Claims 6-9 are rejected for the same reasons set forth in the treatment of Claims 1-4, respectively.

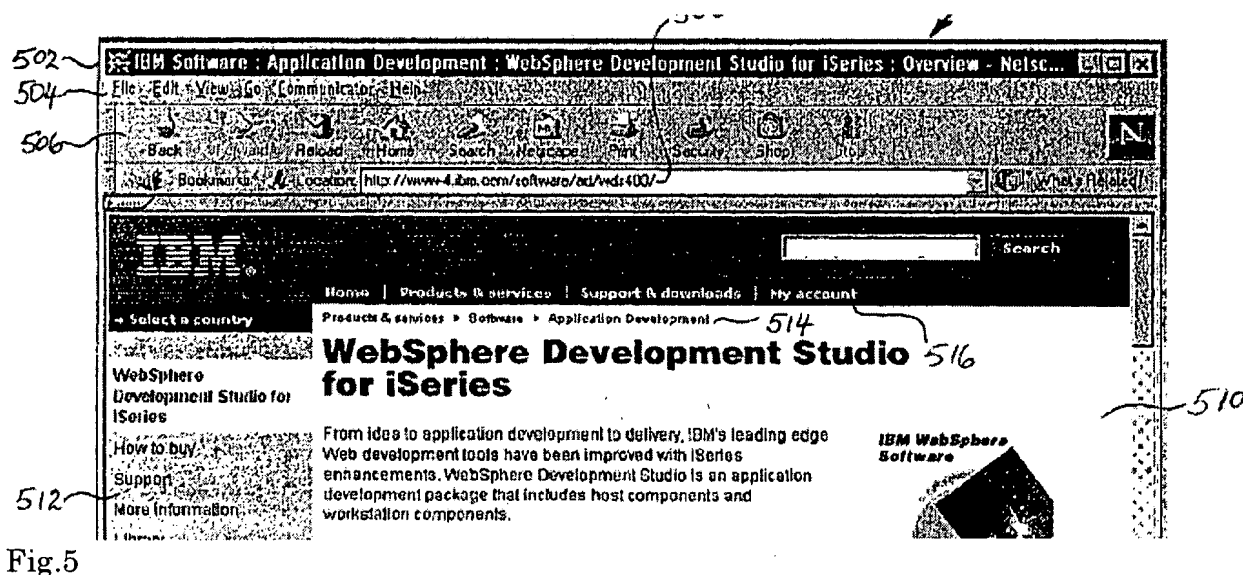

Fig.5

CLAIM REJECTIONS - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2178

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. **Claims 5 and 10** are rejected under 35 U.S.C. 103(a) as being unpatentable over *Dovin et al.* (US Pg-Pub 2003/0018665 A1) in view of *Milic-Frayling et al.* (US Pg-Pub 2005/0132018 A1) .

As to dependent **Claim 5**, which depends from Claim 1, *Dovin et al.* taught a method of presenting network object hierarchy information in a network management tool ("...a user of client 104 utilizes the web browser 106 for transmitting a request for a web page 108, which is identified by a Uniform Resource Locator (i.e., "URL"), over the communications network 102 to web server 114....," para. [0029]), the network management tool for use in managing a communication network having a hierarchy of network objects ("...The depth-emphasizing navigation structure depicts a hierarchical path through the information space from broader categories through more narrower categories through to a final web page, i.e., displaying links from a home page of the Website through a plurality intermediary web pages representing categories (i.e., child web pages) to the current page (i.e., also a child web page) atop the current web page as breadcrumbs, i.e., breadcrumb navigation....," para. [0004]), the method comprising the steps of: displaying status information of a displayed network object on a terminal ("...The displayed web page 510 ...," para. [0042]), the displayed network object having at least one higher-level network object within the hierarchy ("...depicts all top levels of

the Website ..., " para. [0004]); displaying an ordered series of a plurality of buttons on the terminal ("...breadcrumb navigation trail 514 ..., " para. [0042]), each button corresponding to a network object within the hierarchy and being ordered according to a position within the hierarchy of the corresponding network object ("...since the last page represents a web page that is currently displayed..., " para. [0005]), the series including at least a displayed network object button corresponding to the displayed network object ("...storing breadcrumbs associated with web pages downloaded to the web browser at the client, updating the stored breadcrumbs with the generated breadcrumb to form a breadcrumb navigation trail of breadcrumbs associated with navigation of the web pages at the Website; and displaying the breadcrumb navigation trail on each downloaded web page for user selection. ..., " para. [0015]); displaying on each button at least a portion of a label indicating the corresponding network object ("...the generated breadcrumb including navigation information for each downloaded web page..., " para. [0014]); and designating a new displayed network object by selecting a network object displayed in the status information or by selecting a button ("...the current web page ..., " para. [0032]).

Dovin et al. do not clearly show the steps of monitoring for a position of a cursor on the terminal coinciding with a button for which only a portion of a label is displayed; and thereby causing the displaying of the label in its entirety.

However, *Milic-Frayling et al.* disclose the monitoring for a position of a cursor on a terminal coinciding with a button for which, only a portion of a label is displayed ("the pointer icon 606 is positioned over or near the identifier or icon for a specified

length of time. Thus, hovering can occur when the pointer is adjacent to the identifier," para. [0057]); and while the position of the cursor coincides with a button for which only a portion of a label is displayed, displaying the label in its entirety ("A presenting operation 812 presents a thumbnail of the resource identified by the resource identifier over which the pointer icon was hovered. In one implementation of presenting operation 812 the thumbnail is retrieved from the navigation history data storage and displayed in the session overview. In an alternative implementation of the presenting operation 812 a cache of previously stored resources is searched for the selected resource. If the selected resource is found in the cache, the contents of the resource are presented in the thumbnail size browser window.," para. [0082]).

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have used the a cursor coinciding with a button to display more information about the button taught by *Milic-Frayling et al.* with the breadcrumb navigation bar of *Dovin et al.* because: (1) both teaching are in the same field of endeavor of presenting network object hierarchy information; (2) both teaching are directed to the same problem of showing breadcrumb navigation trails using bars; and (3) *Milic-Frayling et al.* suggests the advantage and desirability of using the a cursor coinciding with a button to display more information about a button:

Furthermore, users are often confused by such long lists of identifiers because they are not context sensitive, i.e., they do not link the current user's experience or intention with the resources on the list. For example, if the user has recently visited resources A, B, and C, and the user decides to use History to revisit a previously seen resource M from the list, the display of the History typically does not provide an indication of the currently viewed resource, such as a 'you are here' pointer, (e.g., by

highlighting the indicator of the currently viewed resource C or recently visited resources A, B, and C). The user cannot easily orientate himself or herself within the resource list and browse or search for the resource identifier. Thus, users frequently waste time searching through such lists. (para. [0006]).

See also Fig 6., reproduced below:

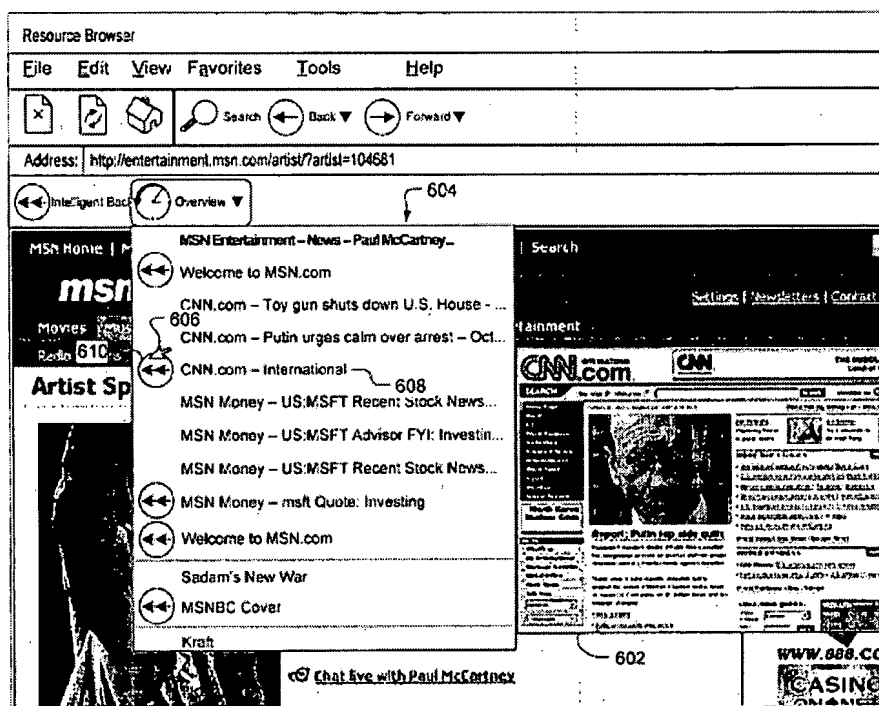

Fig. 6

As to dependent Claim 10, this Claim differs from Claim 5 only in that it is directed to a product defined by the process of Claim 5. Accordingly, this Claim is rejected for the same reasons set forth in the treatment of Claim 5, above.

CONCLUSION

10. All prior art made of record in this Office Action or as cited on form PTO-892 notwithstanding being relied upon, is considered pertinent to applicant's disclosure.

Therefore, Applicant is required under 37 CFR §1.111(c) to consider these references fully when responding to this Office Action.
